

TINY AND FAIR ML DESIGN CONTEST AT ESWEEK 2023

Classification Track: Fair and Intelligent Embedded System Challenge

Rutgers Efficient AI Team

18/09/2023

1. Background

2. Our approach

- 2.1 Self-developed Framework [pycr]
- 2.2 Training
- 2.3 Deployment [highport]

3. Ablation Experiments

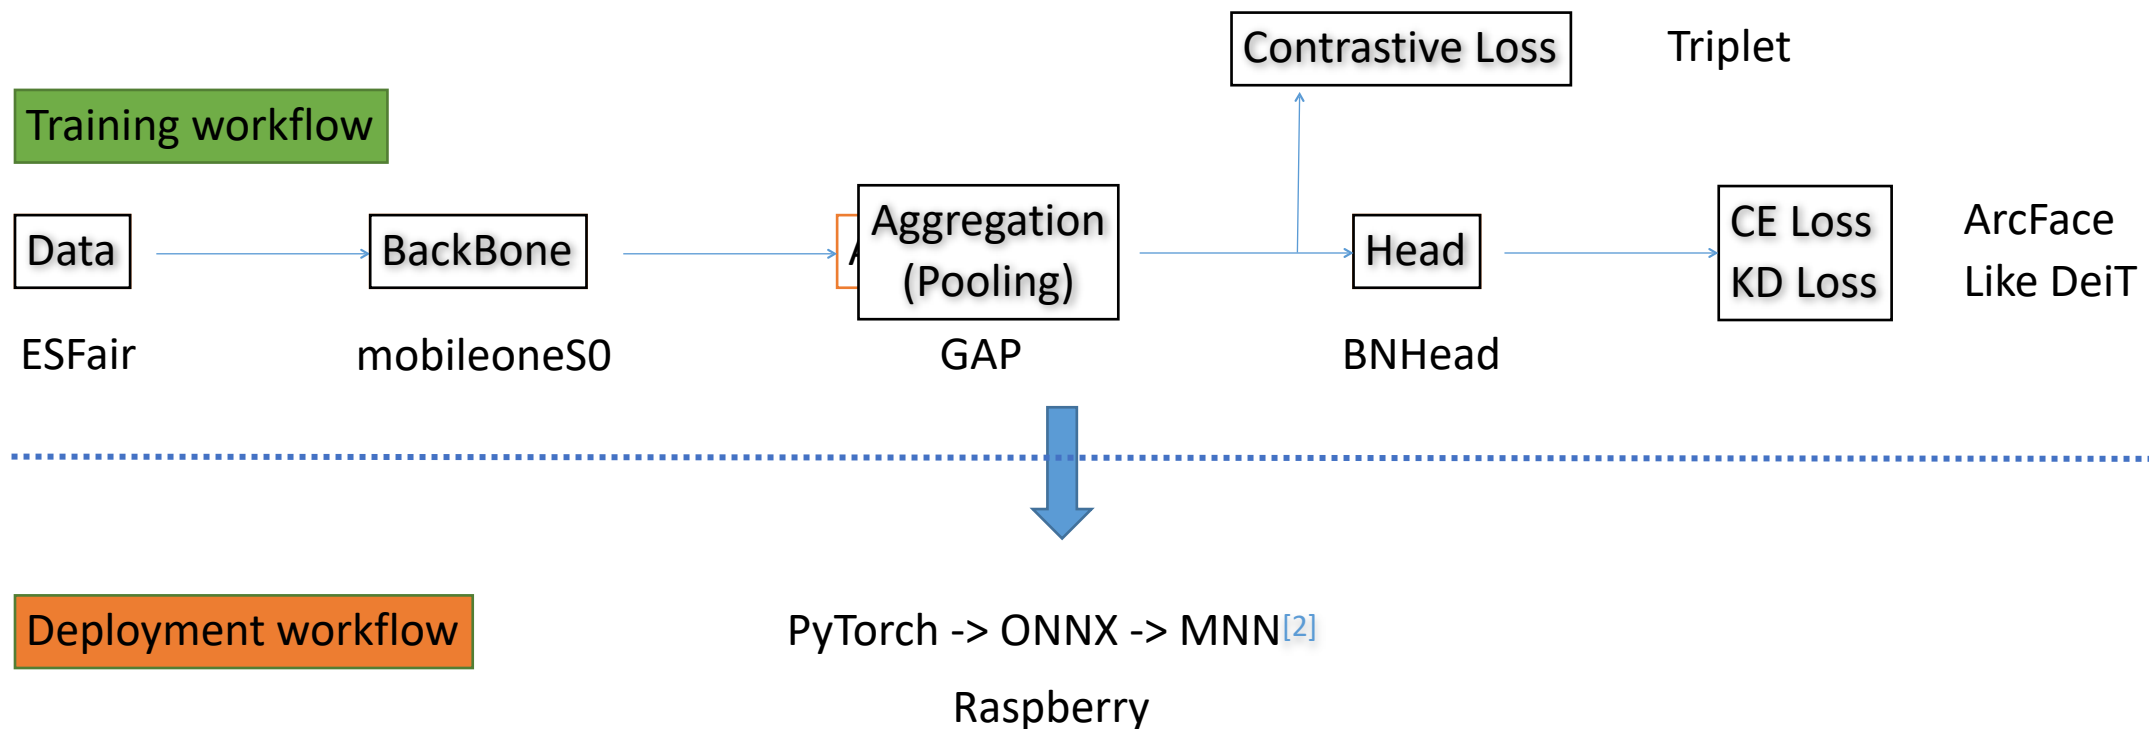

1. Background

To achieve **fairness**, **accuracy**, and **latency** for the **Raspberry4B** from the dermatology dataset.

2. Our approach

2.1 Self-developed Framework - `pycr`(PyTorch for Classification and Retrieval)^[1]

^[1] <https://github.com/xiaochengsky/pycr.git>

^[2] <https://github.com/dreamflyforever/highport>

2. Our approach

2.2 Training

a) data analysis & processing

long tail distribution

VASC

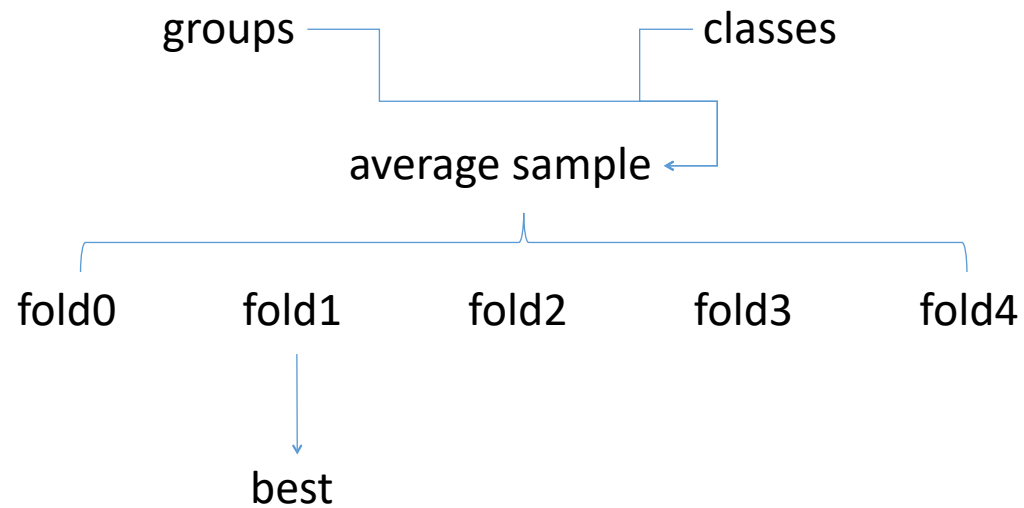

The features are very obvious(acc 98+%)
So, we don't need to worry about the long tail.

2. Our approach

2.2 Training

a) data analysis & processing

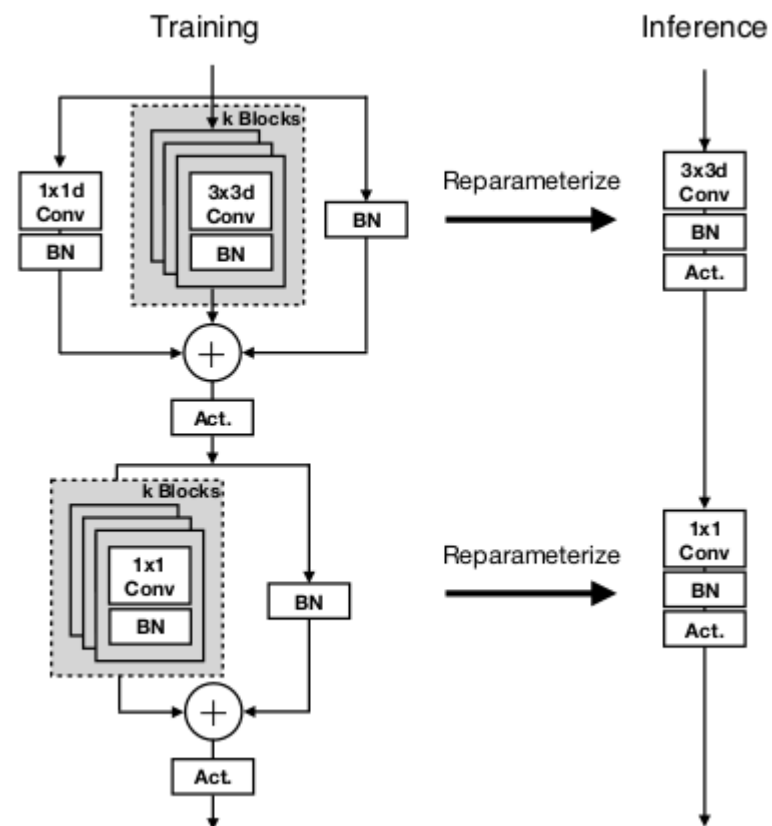

5-fold cross-validation: to find the best fold

2. Our approach

2.2 Training

b) backbone - MobileOne

Model Parameters: 21M \longrightarrow 4.3M

2. Our approach

2.2 Training

c) Classification Loss - ArcFace loss

Softmax loss

$$-\log \frac{e^{W_{y_i}^T x_i + b_{y_i}}}{\sum_{j=1}^N e^{W_j^T x_i + b_j}}$$

ArcFace loss

$$-\log \frac{e^{s \cos(\theta_{y_i} + m)}}{e^{s \cos(\theta_{y_i} + m)} + \sum_{j=1, j \neq y_i}^N e^{s \cos \theta_j}}$$

margin with interclass
in cosine distance space

2. Our approach

2.2 Training

c) Contrastive Loss - Triplet loss

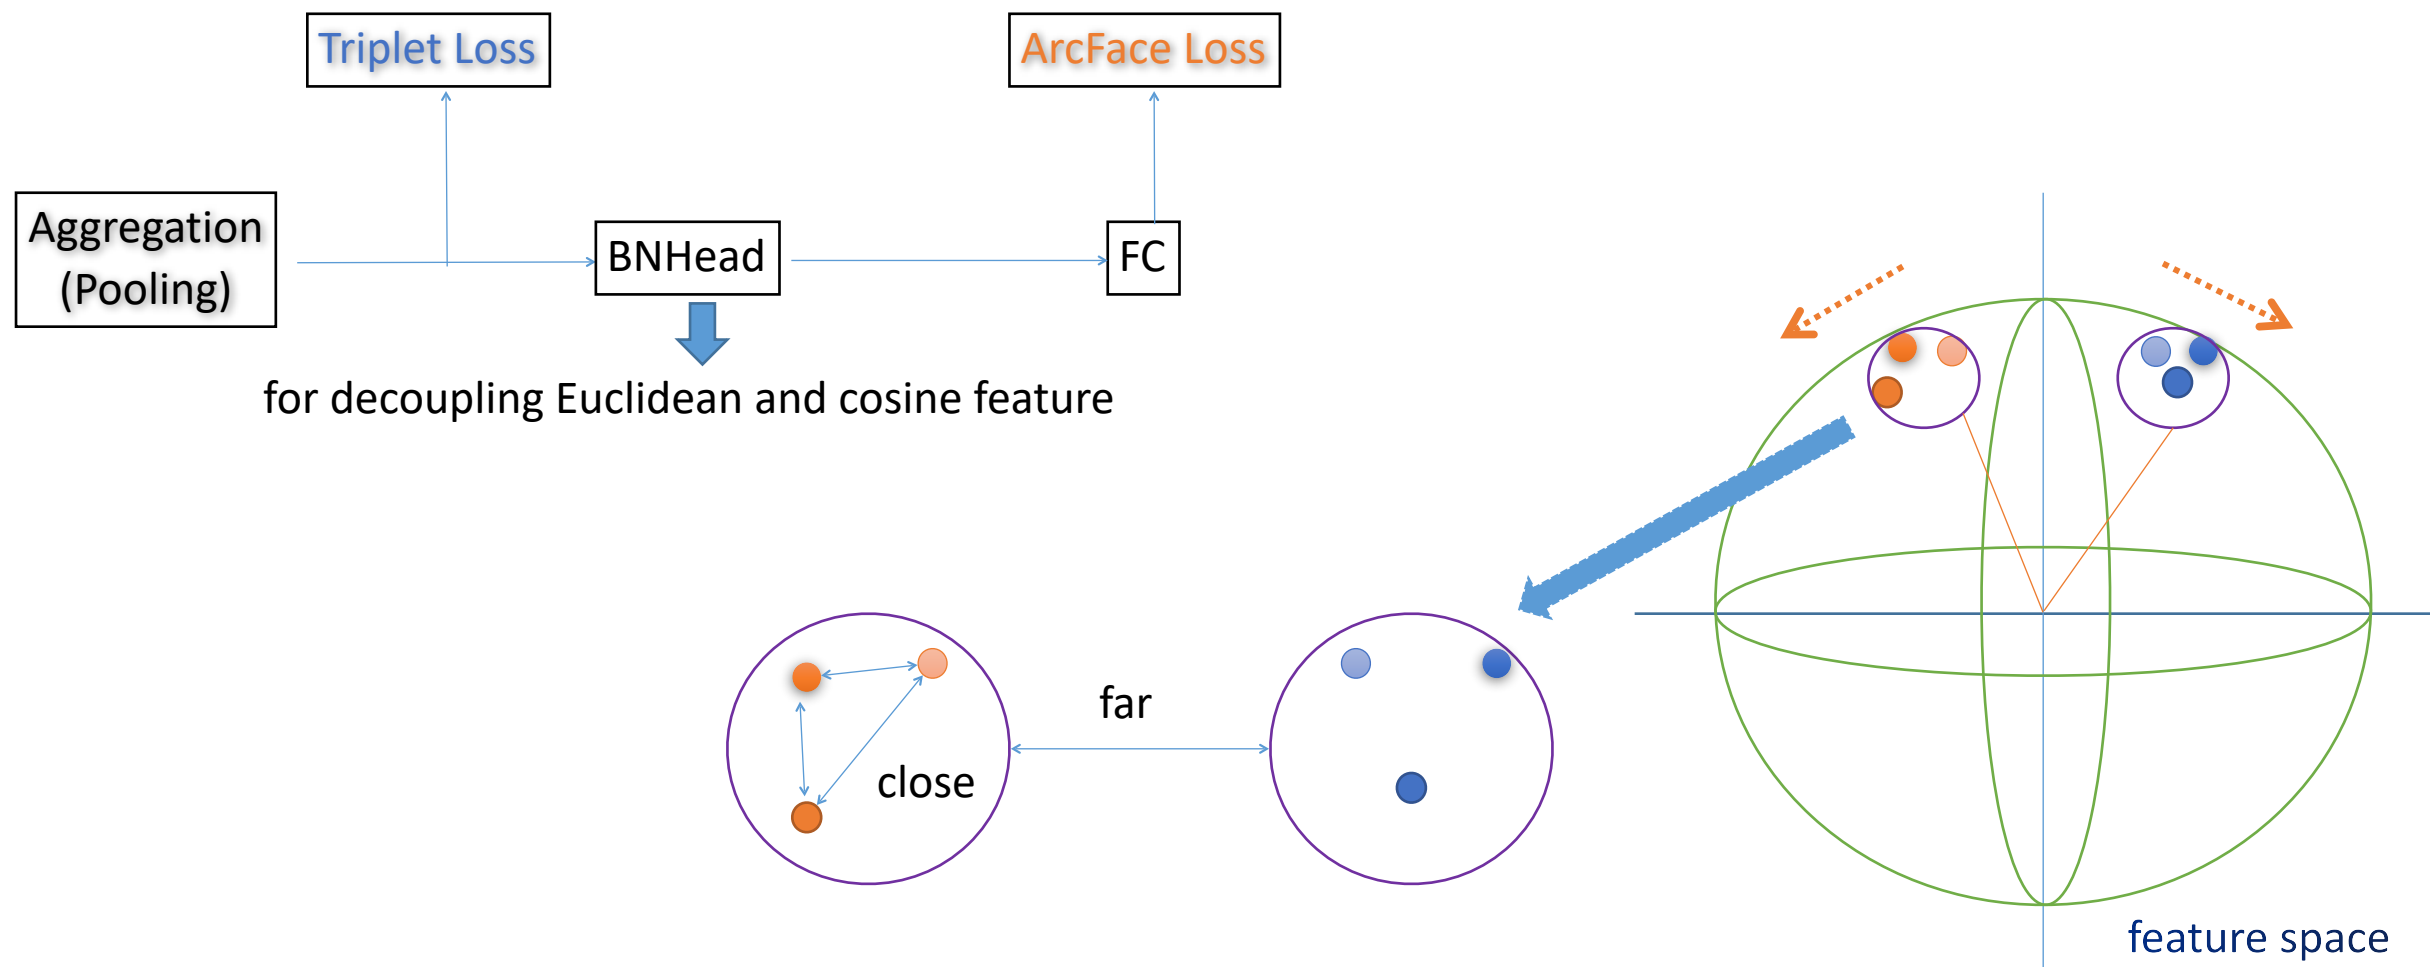

$$\|f(x_i^a) - f(x_i^p)\|_2^2 + \alpha < \|f(x_i^a) - f(x_i^n)\|_2^2$$

2. Our approach

2.2 Training

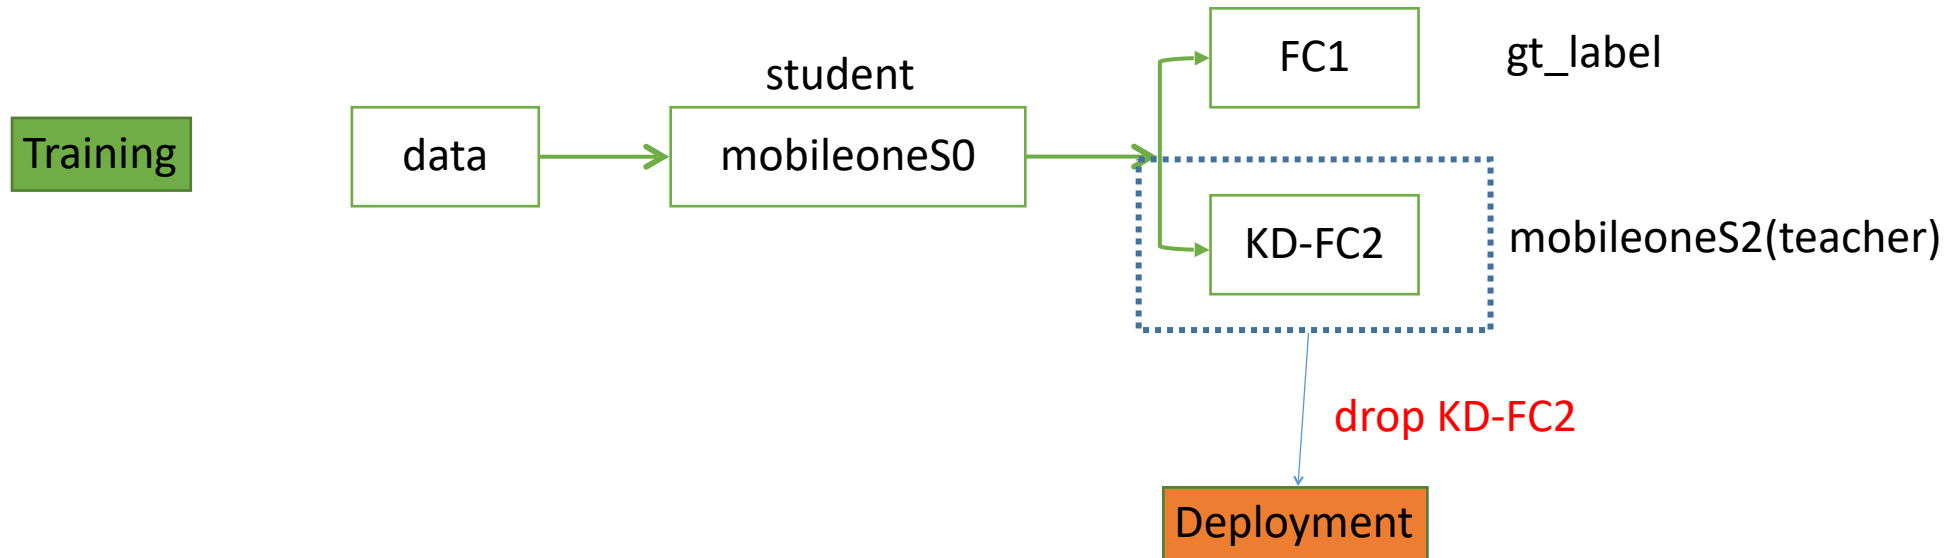

d) Triplet Loss + ArcFace Loss

2. Our approach

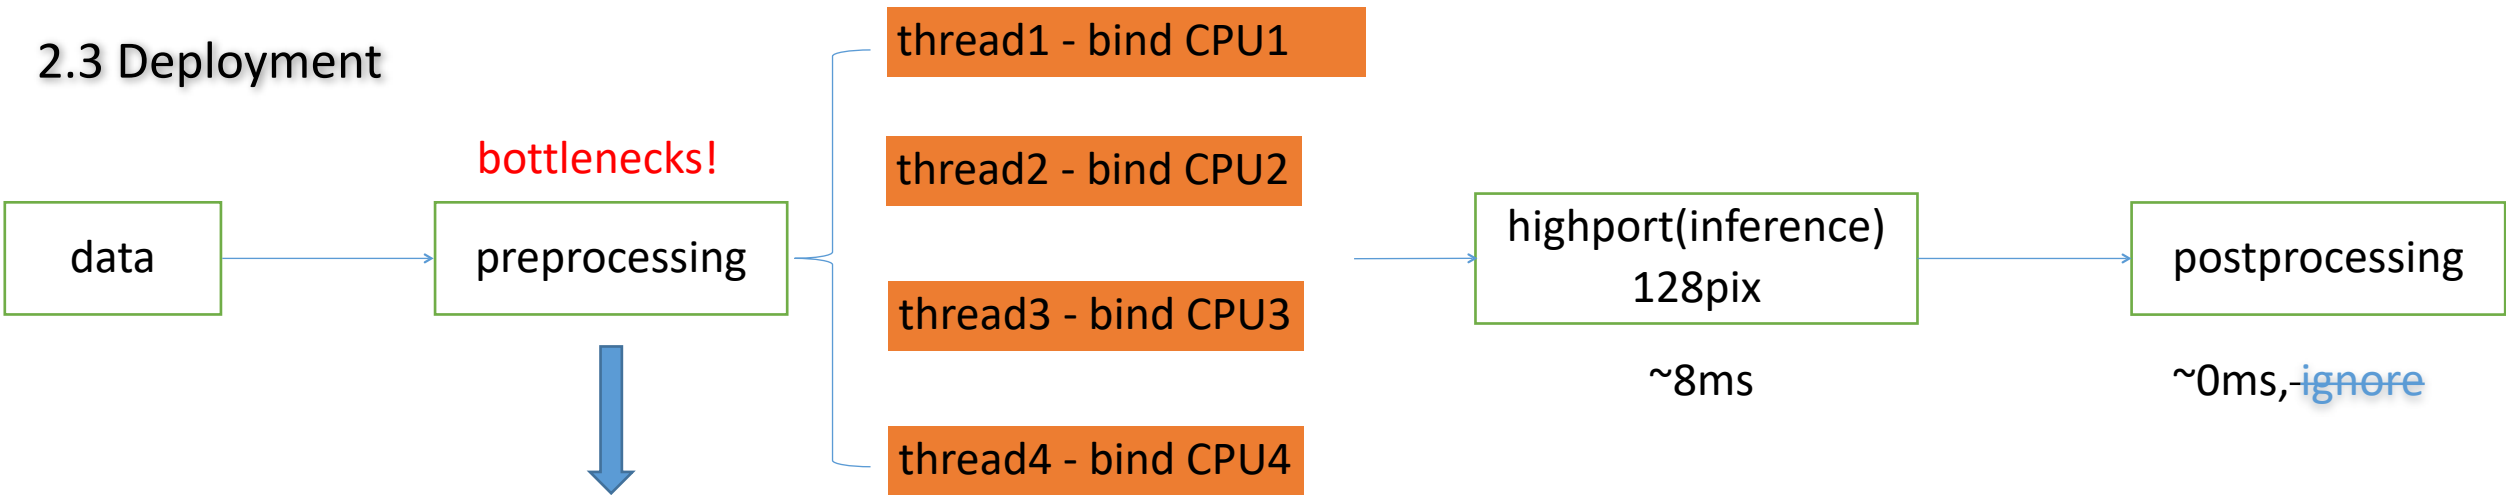

2.2 Training

c) Knowledge Distillation Loss - Kullback-Leibler divergence

2. Our approach

2.3 Deployment

ESFair
Dataset

image size	time cost
450 x 600	~ 25ms
1936 x 2592	~300ms
5184 x 3456	~800ms
6000 x 4000	~950ms

image size	num.
small(<1000 x 1000)	3375
large(>3000 x 3000)	3560
medium	4277

Four threads are 3.4 times faster than a single thread!

3. Ablation Experiments(for fairness and accuracy)

Model	pixel	fairness / 3	accuracy / 3	total
MobileNetV3	224	0.277	0.288	0.565
MobileOneS0	224	0.292	0.293	0.585
MobileOneS0	128	0.285	0.287	0.572 (baseline)
+Augmentation(A)	128	0.290	0.295	0.585(+1.3)
+ArcFace(B)	128	0.295	0.295	0.590(+1.8)
+BNHead(C)	128	0.295	0.298	0.593(+2.1)
+Triplet(D)	128	0.299	0.299	0.598(+2.6)
+EMA(E)	128	0.298	0.303	0.601(+2.9)
+KD(MobileOneS2T)	128	0.302	0.302	0.604 (+3.2)
MobileOneS2+A+B+C+D+E[MobileOneS2T]	128	0.305	0.303	0.608

Augmentation = RandomHorizontalFlip + RandomVerticalFlip + ShiftScaleRotate +
IAAPerspective + RescalePad + Cutout + ~~ColorJitter~~

Thanks!
